

Master Technical Analysis & Options Hedging Strategies (2025 Edition)

Learn to analyze markets, apply powerful technical indicators, and protect your portfolio with proven hedging strategies — no coding required.

What You'll Learn

- Interpret and use major technical indicators (RSI, MACD, Moving Averages, Bollinger Bands)
- Identify chart patterns and market trends with precision
- Apply price action and volume analysis for better entries
- Construct options-based hedging strategies to protect profits
- Understand and calculate Option Greeks and their real impact
- Develop a structured approach to trade planning and risk control
- Master position sizing, stop-loss placement, and portfolio management
- Gain clarity in technical trading & risk management without coding

Who This Course Is For

- Stock & options traders looking to add structure to their analysis
- Investors aiming to protect portfolios from volatility
- Finance students seeking to master practical trading tools
- Anyone interested in technical trading & risk management without coding

Tools You'll Use

- TradingView / ChartIQ for charting and indicators
- Excel or Google Sheets for calculations and portfolio tracking
- Option chain analysis (NSE/BSE or broker terminals)
- Payoff graph tools for hedging visualization
